### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election without traverse of Species I, claims 1, 4, 5, 6, 8, 17, and 20 in the reply filed on 02/24/2005 is acknowledged.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1, 5, and 17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. "said operational efficiency" lacks antecedent basis. It is not known which operational efficiency Applicant is referring.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1, 4-6, 8, 17, and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ataka 5,689,755.

Ataka '755 discloses a system, method, and software for controlling operations of a printer lab having plurality of output devices for producing plurality of different products for plurality of different job orders per claimed invention. The system comprises a controller 5 for monitoring and controlling operations of the plurality of

Art Unit: 3651

different output devices. The controller monitors the operational configuration of each output device and at least one criteria with respect to said job orders in queue. The system comprises a display device 6 connected to said controller for displaying the operational status of each of said plurality of said output devices in a predetermined format. The predetermined format includes information relating to the current configuration status of said plurality of different output devices, the current backlog of said job orders in queue for each of said plurality of different output products. The controller produces a visual indication when said operational efficiency of each output device reaches a predetermined criteria and automatically adjusting the operational status of at least one of said plurality of output devices in response to the respective output device reaching the predetermined criteria. However, Ataka '755 is silent as to the specifics of the printing lab being a "photofinishing" lab. Nevertheless, it is at least obvious that if the outputs from Ataka '755 devices are photographs then the entire system constitutes a photophinishing lab.

In regards to claims 4, 6, 8, and 20, the predetermined criteria include number of job orders in queue at the output devices.
